

nature

Initial and revised submissions

Nature strongly prefers submissions online for Articles, Letters, Reviews and Perspectives, and Brief Communications Arising. These contributions should be submitted using our online submission service (<http://mts-nature.nature.com>). **Do not submit other types of contribution online unless specifically requested by a *Nature* editor;** for further details, see www.nature.com/nature/authors/gta/others.html. If in doubt, send an enquiry message to nature@nature.com first.

Please ensure that your manuscript and figures are ready to submit according to *Nature's* formatting guide (see www.nature.com/nature/authors/gta) before proceeding.

Important requirements

Submissions sent by e-mail will not be considered.

If you submit a manuscript online, please do not also make a postal contribution.

Please also ensure that your browser is set to accept cookies, as the system requires them for proper operation.

Online submissions require the full names and e-mail addresses of all the authors.

Content-related issues

Nature does not require all authors of a paper to sign the letter of submission, nor does it impose an order on the list of authors. The submitting author is responsible for ensuring that all listed authors have agreed all the content.

A copy of a permission letter or e-mail must be included for any work described in the paper as “personal communication” and for any licensed but unpublished work cited.

Nature expects that as a rule, figures in research papers will be original figures generated by the authors. Where this is not the case, the corresponding author must inform editors at submission, and include written permission for use of such figures before or at time of acceptance.

One copy of any relevant paper by any of the authors submitted or in press elsewhere should be attached, ideally as PDFs, clearly marked as such. Failure to do so may lead to rejection.

Nature does not consider contributions under consideration or published elsewhere. This policy does not apply to conference abstracts or to prior postings on recognized community preprint servers. If part of a contribution has appeared or has been submitted elsewhere, the corresponding author must specify in the covering letter which **part** of the contribution will appear or has appeared elsewhere, indicating the publication (or preprint server) concerned. Editors must be consulted if authors wish to publish/publicize any part of the submission elsewhere during the consideration process.

Manuscript formats

Acceptable formats for the manuscript are Microsoft Word (preferred), PostScript (PS, EPS or PRN), PDF, WordPerfect, Rich Text Format (RTF), TeX and plain text (TXT).

The filename, including the extension, MUST NOT EXCEED 31 CHARACTERS, or your file will fail to transmit.

All figure legends and tables should be included in the manuscript.

Figure formats

Production-quality (high-resolution) figures are not helpful at this stage, and will be required only if your paper is accepted in principle for

publication. Follow these guidelines carefully to produce versions suitable for editorial assessment and peer review.

- We prefer that you convert all your figures to medium-resolution JPEG to reduce the upload time to our submission site. If you cannot send JPEG we can accept GIF, PostScript (PS, EPS or PRN), PDF, TIFF and PowerPoint. Please do not send other formats.
- Figures should be prepared at the smallest size possible, and to fit on a *Nature* page. (A single column is 89 mm wide, double column is 183 mm wide).
- We prefer figures to be 150 dots per inch (dpi). Colour, when used as an identifying tool, should be distinct.
- **Please name your figure files using the convention `authorsurname_fig1.jpg`.**
- For figures with more than one part, label parts “a”, “b” etc, and create a PDF scan of the whole figure to show preferred layout. On each composite include the corresponding author's name, *Nature* reference number when known, and the figure number.

Cover letter

This should contain two (100-word or shorter) summaries: a concise paragraph to the editor indicating scientific grounds why the paper should be considered for a topical, interdisciplinary journal rather than for a single-discipline or archival journal; and a separate summary of the appeal to a non-scientific audience.

The cover letter should state clearly what is included as the submission, including number of words of text, number of figures and individual parts (e.g. 4 figures, comprising 16 panels in total), supporting manuscripts and any Supplementary Information (specifying number of items and format). **A rough estimate of the desired final size of figures in terms of number of pages is also needed; and full current postal and e-mail address, telephone and fax numbers.** *Nature* communicates with authors by e-mail; authors must specify if they wish to exclude a method of communication.

Submitting your files

After logging on to the online submission system, you will be asked to fill in your details and submit all files relating to your manuscript.

These will then be converted into PDF format and you will be asked to approve the file conversion. **Please note that the submission process is not complete and *Nature* editors will not receive your files until you have approved the file conversion.**

When checking converted files, please reassure yourself that the conversion is of sufficient quality for editors and reviewers to reach an informed judgement. **Please pay particular attention to any special characters and equations to ensure that these have converted properly.**

Once you have approved the file conversion, your manuscript will be submitted to *Nature's* editors and you will receive an e-mail acknowledgement. At any time afterwards you can use *Nature's* online submission system to check the status of your manuscript.

Security

All users have to enter a password, or have access to an encrypted URL, to access their part of the online submissions system. Encrypted links and passwords are only ever sent to the e-mail addresses of registered users. We have a secure back-up procedure to ensure the data and files on our database are regularly and securely backed up. After submitting their review the reviewer no longer has access to the PDF through our system.

All manuscripts are scanned for viruses using industry standard virus-scanning software as part of the submission process. The virus software is updated daily.

Postal submissions

Nature prefers to receive submissions online. If online submission is not possible, contributions should be posted. In these cases, one copy is required, with a disk (cover letter, manuscript, supporting manuscripts, figures, all in separate files, clearly labelled and named and format identified). Supplementary Information (if any) can be supplied on the same disk, with the files and formats clearly labelled and specified. Do not submit Supplementary Information without first reading the guidelines (see www.nature.com/nature/authors/submissions/final/supinfo.html). Please provide an e-mail address if possible. Submissions can be mailed to:

Nature Editorial
4-6 Crinan Street
London
N1 9XW
United Kingdom

Revised manuscripts

Please use this system **only** if a *Nature* editor has asked you to submit a revised version of your manuscript. **When resubmitting your paper, please use the ‘Revised Manuscript’ link on your author homepage** on the online submissions system.

Revised versions should be sent online, in accordance with the online submission requirements outlined above. They must include the manuscript reference number, a copy of the authors’ response to the referees’ and editors’ comments, and a length estimate of revised manuscripts and figures.

Final manuscripts

If a manuscript is accepted in principle for publication, authors will be required to upload electronic files of the text, production-quality figures and Supplementary Information (if any) to our server. For full instructions see www.nature.com/nature/authors/submissions/final.
